PROFESSIONAL SUMMARY

SDE 2 with 5+ years building Go backends and distributed systems. At Sony (Cloud Raptor) I work on SIE-IntSer-common (shared Go library for event pipelines, Snowflake/Kafka SDKs), secrets rotation, and ops-metrics-platform. At Gojek I shipped Driver Incentives microservices at 10K+ req/sec with under 50ms P99. At Multitv I owned OTT backends for 10M+ users at 99.95% uptime. Strong on Kafka, Redis, PostgreSQL, system design, and production support.

TECHNICAL SKILLS

Languages: Go, Python, Bash

Go Concurrency and Performance: Goroutines, Channels, context package, Mutex/RWMutex, worker pools, pprof profiling, memory optimization, rate limiting, circuit breaker patterns

Backend and Distributed Systems: Microservices, REST, gRPC, Protobuf, Event-Driven Architecture, HLD/LLD, scalability, distributed systems design, Redis caching, API design

Architecture Patterns: Clean Architecture, hexagonal architecture,DDD, CQRS, saga pattern, idempotency, bounded contexts

Testing: Unit, integration, contract, and table-driven tests; load testing; Testify, Mockery, smoke testing

Databases and Messaging: PostgreSQL, MySQL, MongoDB, Redis, Kafka, RabbitMQ, DynamoDB, Snowflake

Cloud and Infrastructure: AWS (Lambda, SQS, S3, EKS, IAM, KMS, Secrets Manager, Step Functions), Docker, Kubernetes, Terraform, SIE-IntSer-common SDKs

Observability and Delivery: Prometheus, Grafana Cloud (Loki, Mimir), GitLab, ArgoCD, CI/CD, structured logging, DORA metrics, OpenTelemetry

AI Engineering and Tools: Cursor, GitHub Copilot, Claude for daily refactoring, test scaffolding, code review, debugging, and docs/Terraform drafts

WORK EXPERIENCE

SDE 2, Cloud Raptor (Client: Sony India Software Centre)

Sep 2025 - Present

Bengaluru, India | Client project (consulting engagement)

- Worked on SIE-IntSer-common, Sony's shared Go library: Snowflake StructScan sources, Kafka/SQS/S3 pipeline SDKs, lookuplite reference caches, and service registry.
- Built Snowflake to Kafka pipeline for Sales/Revenue Recognition using intser-common Snowflake sources and Kafka event-schema sinks. Protobuf events to topics for 50+ downstream consumers.
- Built ops-metrics-platform in Go: pulls DORA and reliability data from GitLab, ArgoCD, and Grafana into Loki/Mimir. EKS CronJobs and ARM64 Lambda on SQS with DLQ.
- Built Python Lambda rotation workers with per-provider adapters and idempotent handlers. Hub-spoke flow with SQS callbacks, DynamoDB registry, and Step Functions across Platform, Payment, Security, and Platform-Infra.
- Wrote Terraform smoke plans with live AWS checks; cut deployment risk by 95%. Grafana dashboards for EKS, RDS, and Redis for on-call and capacity.

Senior Software Engineer, Codevyasa (Client: Gojek)

Feb 2025 - Sep 2025

Bengaluru, India | Client project (consulting engagement)

- Worked on Gojek Driver Incentives and Rewards: reward calculation and event logging for millions of drivers in Southeast Asia.
- Built 8+ Go microservices with Gin and gRPC using goroutines, channels, and context cancellation. Redis caching for 10K+ req/sec and under 50ms P99 on PostgreSQL and Kafka.
- Built bulk scheme upload for 1M+ schemes: CSV parsing, worker pools with goroutines and Mutex, atomic writes, retries, and load testing.
- Ran Kafka consumers (participant_log, driver_reward_points) with custom consumer groups. Message loss under 0.01%.
- Protobuf vendoring via ProtoVend across 15+ teams. Structured logging and Prometheus metrics; MTTR down 60%.

Software Development Engineer, Multitv Tech Solutions

Dec 2022 - Jan 2025

Gurugram, India

- Led backend for OTT apps (ALT Balaji, Art of Living): auth, live/VOD, subscriptions, REST/gRPC for web and mobile. 10M+ users, 99.95% uptime.
- Go/Gin and gRPC services with MySQL, MongoDB, RabbitMQ. HMAC CDN streaming for 50M+ client requests.
- PTI news feed pipeline: S3/XML ingest, DB metadata, XML output, image resize, Alexa skill at 5K+ req/sec.
- Razorpay, Apple, and Google billing with AWS Vault and Pub/Sub. Payment failures down 40%.

Bengaluru, India

- Built Mirauserlab asset-management backend in Go, Gin, MySQL: REST APIs for employees, assets, tracking, and reports.
- Data models and API contracts for asset register, assign, and audit flows.

SYSTEM DESIGN HIGHLIGHTS

- **Driver Incentives Platform (Gojek):** HLD for 8+ Go microservices with gRPC, Kafka, Redis, and PostgreSQL. LLD for idempotent reward pipelines, goroutine worker pools, and consumer-group tuning. 10K+ RPS, under 50ms P99.
- **Secrets Rotation Hub-Spoke (Sony):** Multi-account AWS design with SQS callbacks, DynamoDB registry, Step Functions, and per-provider Lambda workers. Safe rollout with config digests and smoke runbooks.
- **OTT Streaming Backend (Multity):** REST/gRPC APIs with Redis caching, CDN auth, and RabbitMQ async jobs. Multi-tenant setup for 10M+ users at 99.95% uptime.

EDUCATION

B.Tech, Information Technology

2018 - 2021

Punjab Technical University

Diploma, Computer Science

2015 - 2017

Haryana State Technical Education Society (HSTES)
